(54) TEMPERATURE RECORD ANALYZING DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To easily analyze the exact data of temperature management or operation management while contrasting the operation records of a transportation vehicle itself with the records of temperature states in a freezer clearly at a glance by graphing these records on the same time base.

SOLUTION: A temperature graph display data generating means 102 reads out the temperature data of a measuring object, which are measured at every fixed time interval and recorded in a temperature recording means 101 and corresponding to data at that time, and generates display data for displaying the time sequential transition of temperature data as a temperature graph corresponding to the time base while taking time data as that time base. A position designating means 103 designates a position on the time base based on the input of an operator and displays it by a cursor. A numerical temperature display data generating means 105 generates display data for displaying the numerical value of temperature data corresponding to the reading of the temperature graph at the designated

position. A display means 106 displays the numerical values of the temperature graph, cursor and temperature data on a display screen.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
